

Hello there! In an attempt to make it easier for you to continue the work on this crate, we are creating this document as a quick guide.

Folder Structure (“/” denotes a folder, no “.” denotes a file)

2026 Lighthouse/ (root folder)

|
|--- Binder Prints/ (these are PDF and Google Doc files that you can print for the binder. Every file is labeled with the page numbers that it should have. There are a total of 104 pages. The Google Doc file is the “master” file. There are pages in it that tells you where to insert the other loose pages)
|
|--- Interview Video/ (contains Heber’s interview video that need to be hosted online)
|
|--- Poster Prints/ (contains PDFs for two lighthouse posters that need to be printed)
|
|--- Project Status (you are reading it now)

What We Did

- Created a binder with a consistent style (matching decoy ducks) that you can follow for this and other crates
- Created many information content and activity materials in the binder

What Is Left to You

- Proofread the whole thing (this is probably left to the Core Sound Museum staff, actually)
- Add in connections to NC education goals (*an IMPORTANT thing that we didn’t get to*)
- Add in more content. This crate is pretty strong, but it was more rushed and shorter than the decoy ducks one.
- Collect materials. The activities in the binder should each come with a materials list. However, these have not really been compiled into a shopping list (the shopping list tab in the binder Google Doc is a stub). We need to compile all the necessary materials and shop for them.
- Heber’s interview video needs to be hosted online.
- The physical crate still needs to be constructed.

Happy cr(e)ating!
