

33. Mallard (*Anas platyrhynchos*). Without doubt the best-known duck in the world, the Mallard (bottom) has been widely introduced where it does not occur naturally. American Black Duck (*Anas rubripes*). So closely related to the Mallard that the two species hybridize readily, this

duck (upper left) has a much more restricted range. Sea Oats (*Uniola paniculata*). Few grasses present a more graceful appearance waving in the wind than Sea Oats, found on coastal dunes. Its range is more southerly than that of most of the other plants in these drawings.

Name _____

The Great Blue Heron

The heron is a very big bird with long legs and a long, sharp bill. It wades in the pond and looks for fish and frogs to eat.

☐ Draw some fish for the heron.

The Pond ☐
